

PROVIDER UPDATE

Access immunization records through the Immunization Registry, part of the Delaware Immunization Program.

The Immunization Registry is a database that contains the immunization records of Delaware residents. This database makes immunization records accessible to health care providers.

By placing these records in one database, the Division of Public Health hopes to:

- Ensure all Delaware residents are properly vaccinated.
- Provide a timely and accessible record to physicians, emergency room staff, school nurses, and parents.

To obtain access to the Immunization Registry or to obtain immunization records, visit hho.fyi/immunize, scan the QR code, or call the program office at 302-744-4850.
